## Objective

Aspiring Software Engineer with experience in building IoT-based systems and backend applications using React, Vercel and Firebase. Strong in system-level debugging, automation logic, and real-time data processing. Seeking to apply software development and problem-solving skills in scalable systems.

## Experience

- URSC/ISRO through Sree Venkateshwara Enterprises** March-2022 - December-2023  
Technical Support Engineer  
Diagnosed and resolved system-level hardware and software issues across desktops and networks.  
Performed debugging of OS, drivers, and application-level failures.  
Automated troubleshooting workflows and improved system reliability.  
Worked with low-level hardware and software interaction.

## Education

| Course / Degree | School / University                   | Grade / Score | Year |
|-----------------|---------------------------------------|---------------|------|
| BE in ECE       | R V College Of Engineering, Bengaluru | 7.86          | 2026 |
| Diploma in ECE  | Govt. Polytechnic, Immadihalli        | 83%           | 2021 |
| PUC in Science  | Sahyadri PU College, Kolar            | 77.6%         | 2019 |
| SSLC            | Green Valley Public School            | 90.26%        | 2017 |

## Projects

- Solar Enerlytics: A Grid integrated PV System with Weather Forecast Analysis**
  - \* Designed a Hardware integrated production grade system for monitoring and managing solar power generation, with weather forecast analysis and ML model.
  - \* Designed and implemented a full stack website hosted on vercel, for monitoring and managing with professional UI and a Supabase database.
  - \* Website consists role based access for client and utility admin.
  - \* In addition clients also has a dedicated movile application with real time data, history,and billing.
- VaidyaMithra – A complete Hospital Management System**
  - \* Website consists of Role based Access for Patient, Attender, Doctor, and Admin. Patients request schedule, attender books a slot and can enter vitals, doctor writes prescription and completes.
  - \* Developed an AI-powered health assistant that analyzes user symptoms using LLMs and provides structured preliminary insights with confidence scores and risk flags.
  - \* Implemented secure cloud architecture using Firebase (Auth/Firestore) and Vercel, ensuring safe API handling and persistent user data.
  - \* Integrated real-time features including AI chatbot with web grounding, real-time status update, notifications,and geolocation-based hospital suggestions.
- Smart Waste Management System with Real-Time Tracking and Role-Based Access**
  - \* Real-Time Waste Collection Monitoring System (React Native App).
  - \* Intelligent Waste Collection Platform with Live Tracking.
  - \* Urban Waste Management App with Role-Based Control.
  - \* Geo-Enabled Waste Collection and Monitoring System.
- Trip Expense Tracker – Real-Time Group Finance Management App**

- \* Developed a mobile app to manage pooled group travel expenses (Cash & UPI) with real-time balance tracking.
  - \* Designed a fast "Quick Add" flow using custom UI components, enabling expense logging in under 5 seconds.
  - \* Implemented analytics features including categorized spending insights, daily history, and budget alerts.
- **NAMMA RAITHA – Hyper-Local Agri-Marketplace**
    - \* Developed a full-stack web platform connecting farmers and buyers with role-based dashboards, enabling inventory management, product discovery, and direct sales.
    - \* Integrated geolocation-based search using Leaflet.js and built a dynamic CRUD system with automated stock updates and real-time analytics using SQL queries.
    - \* Implemented features like multi-language support (English/Kannada), rating & review system, and mobile-first UI, improving accessibility and user experience.

## Achievements & Awards

---

- Second Place in The Major Project Showcase held at RVCE for "Solar Enerlytics: A Grid Integrated PV System with Weather Forecast Analysis"

## Skills

---

- Programming Languages: C, Python, HTML, React
- Software & Tools: VS Code, Arduino IDE, Pythonanywhere, Flask, Expo, Vercel.
- Operating Systems: Windows, Linux (Ubuntu).
- Hardware Description Languages (HDLs): Verilog, System Verilog.
- Hardware Platforms & Microcontrollers: FPGA Boards, Raspberry Pi, Arduino Uno, ESP8266/ESP32.
- Core ECE Concepts: Digital Logic Design, Analog Electronics, Embedded System Design, Microprocessors & Microcontrollers, and VLSI Design.

## Personal Details

---

- Date of Birth : 13/02/2002
